Recent leaks of the highly anticipated iPhone 7 suggests also Apple is rethinking its famous home button for this year's handset.

iPhone 7??Home??

The latest images to surface appear to present this feature not as a button, but as a touch sensitive pad.

????????iPhone????“Home”????????????????

Sources say the new 'button' will be flush with the body of the smartphone, instead of protruding from the bottom bezel, and users will have to perform tapping actions to activate specific functions.
