The Tiny1 is up now on Indiegogo, with pre-orders going for \$399 for a kit of the Tiny1 camera and a 2.8mm F1.4 wide-angle lens. If you're hoping to take it out on a summer camping trip though, you'll likely have to wait until next year. The Tiny1 hardware itself is still in the finalization stages in regard to design, and as it's TinyMOS's first hardware device, the company's December 2016 shipping estimate is probably optimistic. A demo of the TinyMOS software is already available on the Play Store, and shows off some of the augmented reality software features of the camera.
