

《鼻腔喷雾器:帮助精神病患者改善社交技巧,这么神奇?》

导读:研究表明,即便是使用一剂量的催产素,人们也更倾向于直视某人而非回避别人的目光。鼻腔喷雾器,竟然如此神奇!

To test the nasal spray device, scientists at the University of Oslo worked with Optinose, a Norwegian biotechnology company.

??Optinose????????

The patient inserts the device into the mouth and into one nostril. The patient takes a deep breath, closes the lips around the mouthpiece, and exhales into the device. The airflow carries the drug particles deep into the nose."

"??"

This means the oxytocin can get into the central nervous system faster, making it more effective.

????????????????????????????????????

A lot of mental illnesses are characterized by deficits in social dysfunction, such as autism and schizophrenia. But there aren't any actual treatments which specifically target social dysfunction. So oxytocin has actually generated a lot of interests in its potential to treat social dysfunction."
