

《失明20年，电子眼镜帮她看到曾孙》

导读:美国一名妇女在失明近二十年后，最近在电子眼镜的帮助下第一次看到她的曾孙。该眼镜售价1.5万美元每副。

A Georgia woman who has been nearly blind for the past 20 years recently saw her great-grandchildren for the first time with the help of electronic glasses.

??

Fox 5 Atlanta reported that Betty Lord, of Mableton, tested eSight glasses, which operate with a high-speed camera that relays pixels in front of the user and transforms them into enhanced video that is then viewed with LED screens. The Toronto, Ontario-based company eSight sells them for \$15,000 a pair.

The glasses depend on remaining eyesight, and can be used for people who have suffered from diseases like glaucoma or macular degeneration, the news station reported. In 81-year-old Lord's case, she lost her eyesight due to complications with diabetes.

In a video produced by Fox 5 Atlanta, one of Lord's first responses upon regaining her eyesight was, "You need to go on a diet!" looking over at one of her relatives. The remark prompted her family to break out in laughter.

"I just can't tell you how much this means to me," Lord told her family.

Lord's family has started a GoFundMe page to raise money so she can buy the glasses. As of Thursday morning, the account had raised nearly \$4,000 of its \$15,000 goal.
