

《英特尔也来玩VR了！新推出Alloy一体化虚拟现实眼罩》

导读:在英特尔全球开发者论坛上，英特尔CEO展示了最新的Alloy融合现实项目以及Alloy一体机，英特尔正逐渐展露在虚拟现实领域的布局。

Intel has unveiled its newest virtual reality headset called “Project Alloy.” Through this gadget, the company introduces the concept of “merged reality.”

????????“Alloy??”????Alloy????????????Alloy????Intel????????“????”?

The biannual Intel Developer’s Forum began with a virtual display of music. A drummer does not need actual drums and a musician can play a virtual piano and cello at the same time.

??

But Intel unveiled something that blends the lines of reality even further: Project Alloy. It is called Merged Reality and it eliminates the need for handheld controllers. Instead, you use your real hands in the virtual world. Alloy warns you if you are going to bump into real people or objects.

??????“Alloy??”????????????????????“????”??Alloy??????????

“Not only move around freely in the virtual world. But he was able to bring the real world into that virtual world where he used his hand to interact. We can do that with almost any object. And we can flip that. We can take the virtual world into the real world,” Intel CEO Brian Krzanich said.
