

《新加坡寨卡病毒大爆发 感染病患已达318人》

导读:新加坡寨卡疫情再度爆发，目前该国感染寨卡病毒总人数已经上升到了318人。

Singapore confirmed 14 new cases of locally transmitted Zika virus infection on Saturday, bringing the total number of Zika infections in the city state to 318, the Ministry of Health (MOH) and National Environment Agency (NEA) said in a joint statement.

???????MOH????????NEA????????????????????????????????14????????????????????????????????318??

MOH said among these newly reported cases, seven cases are linked to the Aljunied Crescent/ Sims Drive/ Kallang Way/ Paya Lebar Way cluster, one case is linked to the Bishan Street 12 cluster and one case is linked to the Bedok North Avenue 3 cluster.

The NEA is continuing with vector control operations and outreach efforts in the cluster areas. As of Friday, a total

of 194 breeding habitats have been found and destroyed in the cluster areas, of which 117 are from homes, and 77 are from common areas or other premises.
