

《科幻或将成真——优步正研发飞行出租车》

导读:优步首席产品官宣布，十年内优步垂直升降飞行器将问世，为未来奠定新格局

Well, this is an interesting turn. In order to better handle the transportation needs of urban dwellers, Uber is looking into vehicles that could take off and land vertically. In other words...flying taxis.

??...????????????????????????????????

In a discussion at the Nantucket Conference yesterday, Uber products head Jeff Holden said the company has been looking into offering short flights around cities “so we can someday offer our customers as many options as possible to move around,” according to Recode. The Uber product boss did not specify whether the vertical-takeoff-and-landing craft, or VTOL, would be piloted like traditional aircraft, remote-controlled, fully autonomous, or some combination thereof, like Airvinci’s helicopter drones .

??“??”????????????
????????????VTOL??Airvinci??

Holden claimed the technology could be available within a decade; that said, clearing the legislative and logistic hurdles involved with creating a network of flying taxis in a dense urban environment...especially considering the
