

《Bugged out: Insect the size of a human arm》

A Chinese museum claimed they have bred the world's largest insect. The female stick insect measures 64 centimetres (25 inches) long, the average length of a young man's arm. The artificially bred bug has broken the record set by its parent which is 62.4 centimetres (24.6 inches) long. The insect species, known as the Chinese gigantic stick insect, was found in a forest in Guangxi in 2014. The massive bugs like strawberry jam and would give up other food for it. (Photo: HSW.cn)
