

《手臂上“种”耳朵，医生打破传统创造神奇》

导读:一年前，患者吉某因为车祸致右侧颌面部严重外伤、右耳廓撕脱缺失。医生通过手臂上“种”耳朵的方式为他进行了耳再造手术。

Doctors treating a man who lost his right ear in a car accident have helped him grow a new one on his arm.

????????????????????????????????

The patient, identified only as Ji, who is in his late 30s, was injured a year ago and has been receiving treatment from Guo Shuzhong, an expert in reconstructive surgery at the First Affiliated Hospital of Xi'an Jiaotong University in Xi'an.

????????30????????????????????????????????

Guo, who has 33 years of experience, and his colleague devised a three-step reconstruction plan using part of the patient's rib cartilage.

??33????????????????????????????

In the first phase, doctors buried a skin expander in the patient's right forearm and regularly injected water to expand the skin. In the second phase, doctors took part of the rib cartilage from the patient and buried it under the expanded skin, which was successfully done on Tuesday.

??

The third phase of the operation, to transplant the new ear onto Ji's head, will be carried out in three or four months.

????????????????????????????

Ji, looking at the ear growing on his right arm, said with a smile: "It looks exactly the same as my old ear."
