

《阿司匹林不止是止痛药，还可以抗癌！》

导读:我们经常吃的阿司匹林居然不止是止痛药，还可以预防癌症。

Aspirin has been used as a medication to treat pain, fever and inflammation, but a new study shows that daily doses of aspirin could also help ward off cancer.

??

Earlier studies have discovered that aspirin may decrease the risk of certain types of cancer, but scientists remain puzzled for years over how exactly the drug works to prevent the deadly disease, with many attributing it to the drug's inflammation-lowering properties.

??

According to the new study, scientists from Veterans Affairs in Texas suggested that the pain-relief medication's interaction with platelets, the blood cells that form clots to stop bleeding, could stop tumors from growing.
