The emphasis is all part of the growth of informatization, which involves the use of new communications technology to boost society's development, experts said.

????????????????????????????????

Qin An, director at the Institute of the China Cyberspace Strategy, called Xi's emphasis on the role of the people in internet governance significant.

????????????????????????????

General Secretary Xi has required officials of all levels to get close to the public through logging on to the internet, because lots of people express their wishes and give their suggestions online, he said.

??“????????????????????????????????”

Xi's central role on internet issues is not new. He headed up the Central Internet Security and Informatization Leading Group, established in February 2014.

Cybersecurity was also among the issues on the discussion list during the meeting between Xi and his US counterpart Donald Trump in Florida this month. The two leaders later agreed to establish four high-level dialogue

mechanisms on diplomacy and security, economy, law enforcement and cybersecurity, and society and culture.

At the Third World Internet Conference in November, Xi's live-broadcast speech to the opening ceremony included a call for the collaborative creation of a cyberspace community of shared destiny.

?11????????????????????????????????????????????????????????????

The online world should be built upon the notions of equality and respect, innovation and development, openness and sharing, and security and order, Xi said.

????????????????????????????????????

Fang Xingdong, founder of Chinalabs, an internet strategy think tank, said the concept of the cyberspace community, an idea put forward by Xi, is a core idea for cyberspace development.

??????Chinalabs????????????????????????????????????????????????????????

only when we are open and inclusive and accept each other can we better administer cyberspace, Fang said.
