

《12岁女孩智商162，比爱因斯坦还聪明！》

导读:印度一名12岁女孩IQ测试得分162，而爱因斯坦和霍金也不过才160而已！难道又一位天才即将诞生？目前这名女孩已经加入了门萨。

A 12-year-old girl has joined the ranks of Mensa after attaining a higher IQ score than those attributed to Albert Einstein and Professor Stephen Hawking.

??12?????IQ??

Lydia Sebastian scored a maximum 162 in the 150-minute test of mental agility.

?????150?????????????????????.?????????????162??????

The minds behind the general theory of relativity and Hawking radiation are estimated to have IQs of 160.

???IQ???160???

Lydia's parents only allowed her to sit the test because she had nagged them about it for a year.

??

They have never pushed her academically and said they were astonished at the result.

????????????????????????????????

Her father Arun, 43, said: 'We really have done nothing special with her. She's our only child so we don't have anyone to compare her with.'

??43?????????"??"

'The only thing I'd say is that she started speaking when she was quite young – about six months. At the time I was a trainee doctor and my wife was studying chemistry and I was away at weekends. She used to say a few words to me on the phone.'

"??"

'She also had an early interest in reading. When she was a few years old she was reading books that were for children several years older than her.'

"??"

'And maths is her favourite subject. She won a prize for that when she was at primary school.'

"????????????????????????????????????"

He added: 'We've got a fairly laid back view [about education]. If a child is pushed to do something that's not designed for their age then, personally, I'd feel they they'd be missing out on other things.'

?????"??"

'Even now she comes back from school to sit down and do homework until 8.30 or 9pm.'

"????????????????????????????8??9???"
