《一眼就能识别出人是否生病》

医学专业人士可以通过看照片来判断一个人是否生病。

A recent study revealed medical professionals can determine whether someone is sick just by looking at their photos.

??????????????????????????????????

According to mnn.com, "Scientists have determined that humans have a remarkable ability to detect when someone is sick a mere two hours after the person is infected, and they can do this just by looking at the person’s face."

??????????“??”

Signs that they used to notice if someone was sick were "paler lips and skin, a more swollen face, droopier mouth corners and eyelids, redder eyes, and duller, patchier skin."
