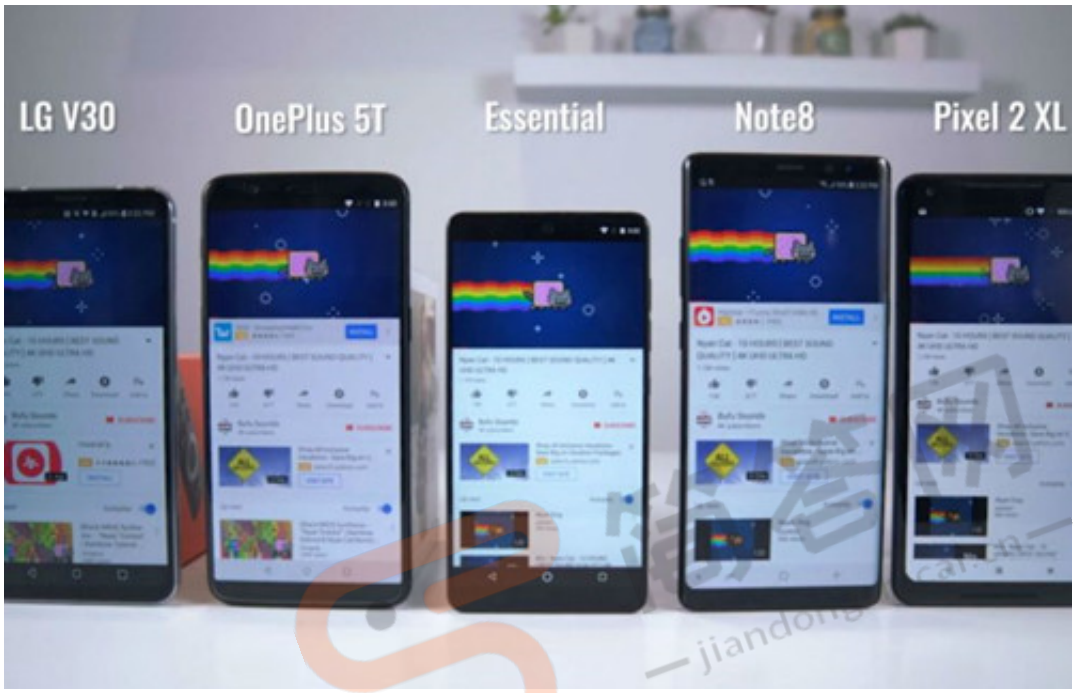
《手机电池哪家强？》

智能手机已经成为了人们日常生活的必备之物，电池寿命成为了人们选购智能手机的关注焦点。究竟哪种手机的电池寿命最长？文中测试或许可供参考。



Aiming to make our lives easier, smartphones offer a wide variety of functions that help to simplify daily life while helping us stay connected to each other. These daily connections and simplifications have become so essential to our everyday lives that smartphones have become crucial to our very existence. Because of this, we bank on these devices to be dependable above all else, and a huge part of that dependability is reliant on battery life.

??

Well aware that battery life is a major selling point for any device, smartphone manufacturers now often tout how long a battery could feasibly last given its technical specifications. Despite this type of specificity, how do we know for sure that a phone's battery will last as long as the manufacture says?

??

Wanting to answer this question and determine which smartphone has the best battery life, we did a not-so-scientific test that pitted seven different phones against one another. We tested devices that are already known for their battery life — the LG V30, iPhone X, Essential Phone, etc. — and are fairly commonplace in today's market. We removed the SIM card from each, connected them to the same gigabit Wi-Fi network, and played a YouTube video on loop until each phone died.

??LG V30?iPhoneX?Essential Phone????????????????????????????????????SIM????????????????????????Youtube??????????

Here’s the results of the test (organized by best battery life to worst):

??????????????

Smartphone Run Time

????????

Huawei Mate 10 Pro 11 hours and 22 minutes

??Mate10 Pro 11??22??

Samsung Note 8 11 hours and eight minutes

??Note8 11??8??

LG V30 10 hours and 58 minutes

LG V30 10??58??

One Plus 5T 10 hours and 54 minutes

One Plus 5T 10??54??

Google Pixel 2 XL Nine hours and 12 minutes

??Pixel 2 XL 9??12??

iPhone X Nine hours and 10 minutes

iPhoneX 9??10??

Essential Phone Eight hours and 14 minutes

Essential Phone 8??14??

Again, this isn’t the most scientific of tests, but it does give you an idea in regards to how long each of these phones will last in real-world circumstances. Battery life, however, shouldn’t be the be-all and end-all when deciding which smartphone to purchase. That’s not to say that battery life isn’t important, but, as this test shows, the difference in longevity for most of today’s top smartphones is relatively small.
