

《一女子腹部切除一个重达132磅的肿瘤》

美国一家医院为一名38岁的女子做了肿瘤手术，从女子身上摘除了一个重达132磅（约120斤）的卵巢肿瘤。手术耗时5个小时。

Doctors at a Connecticut hospital say they removed a 132-pound tumor from a woman's abdomen, and she is expected to recover fully.

????????????????????????????????132????????????????????

The ovarian tumor was diagnosed after the 38-year-old woman reported rapid weight gain of about 10 pounds per week over a two-month period.

????38????????????????????????10????????????????

The doctors at Danbury Hospital announced Thursday that the five-hour surgery was completed successfully after extensive planning by a team of 25 clinical specialists.

The tumor was benign, but because it was sitting on a major blood vessel, doctors say they were concerned about

the patient's heart. The patient was also malnourished because the tumor was sitting on her digestive tract.

??

Pathologists have been conducting genetic tests on the tumor to learn why it grew so quickly.
