

《特斯拉放弃正要推出的廉价电动车》

Tesla is scrapping plans for a bargain Model Y SUV because of its short range on a single charge, CEO Elon Musk said in a tweet over the weekend.

?????????·????????????????????Model Y SUV????????????????????

Earlier this year, the electric car maker began producing its pricier, dual-motor all-wheel drive version of the Model Y, which starts at \$49,000.

????????????????????????????????Model Y???49,000?????

Tesla had planned to roll out a cheaper version of the Model Y — expected to be priced under \$40,000 — with a single engine, rear-wheel drive and smaller battery. But Musk tweeted that the range on that vehicle would have been "unacceptably low" at less than 250 miles on a single charge.

????????????Model Y????????????40,000????????????????????????????????"???"????????????250???

Tesla says it is still planning a more affordable, single-engine version of the Model Y, but it will have a bigger

battery and longer range than the shortest range version of the Model 3. And because of that, it'll probably have a higher price tag.

Model Y Model 3

The company typically offers for each vehicle a "long range" version and a more expensive "performance" version that might get fewer miles per charge but can, for example, accelerate faster.

Model Y

Musk said in a follow-up tweet that the single-motor Model Y would come out "in a few months."
