According to the data provided by the National Bureau of Statistics, the online food delivery market experienced an annual growth rate of over 30% from 2016 to 2020. In 2020, the market size reached 1.6 trillion yuan, accounting for approximately 10% of the total food service industry.

Several factors contribute to the growth of the online food delivery industry. Firstly, the

convenience and speed of ordering food through apps have attracted busy individuals who prefer to spend less time on cooking. Secondly, the COVID-19 pandemic has accelerated the trend, as people are increasingly relying on contactless delivery to minimize the risk of infection. Lastly, the fierce competition among online food delivery platforms has led to improved services and greater choices for consumers.

However, the growth of the online food delivery industry also brings challenges. The excessive use of plastic packaging can have a negative impact on the environment. Additionally, some consumers express concerns about the quality and hygiene of the food prepared by restaurants.
