- 1、How to use high throughput exon array to analysis different mRNA isoforms expression is very important.

如何利用表现序列晶片分析信息核糖核酸同型体的表现量,是相当重要的.

- 2、In alumina, plywood, aluminum ingots and other products throughput ranked the forefront of coastal ports.

公司在氧化铝、胶合板、铝锭等产品的吞吐量位居全国沿海港口前列.

- 3、Objective To develop a high throughput method of screening the binding site of DNA adducts.

目的探讨建立一种高通量的筛选DNA加合物结合位点的方法.

- 4、Throughput is verified by extension rate of the mine.

用矿山延伸速度验证生产能力.

- 5、Main haven port's cargo throughput occupies the 90 % of countrywide haven port's cargo throughput about.

主要港口货物吞吐量约占全国港口货物吞吐量的90%.

- 6、The invention raises throughput and fairness of satellite network, and reduces transmission delay.

采用本发明,可提高卫星网吞吐量和公平性并减小传输时延.

7、 Drive continuous improvement in every phase of the operation yielding agreed targets on quality, and throughput.

为既定的目标对质量、 生产能力进行持续改进.

8、 By introducing MCI initial allocation, improved algorithm increases system throughput compare to the bound (PF).

通过引入MCI初始 分配结果, 改进算法可提供比理论上界 (比例公平) 更高的系统吞吐量.

9、 Probability distribution of cargo throughput was acquired using throughput probability theory.

应用全概理论,得到货物总吞吐量的概率分布.

10、 Performance is largely determined by a combination of three other factors: throughput, response time, and availability.

性能本身大体上由吞吐量、 响应时间及可用性等三项因素所确定.

11、 A switch provides more throughput to hosts on a LAN.

一个开关提供较多的生产给一个区域网络上的主人.

12、 The average daily throughput was 1,370 tons of ore in 1999.

1999年的日平均产量为一千三百七十吨矿砂.

13、 Web site throughput analysis system is a reliable guarantee for improving site service quality.

Web网站的流量分析系统是提高网站服务质量的可靠保证.

14、 Relieving the hypervisor of packet filtering and sorting improves overall CPU usage and throughput levels.

降低过滤和排序数据包的管理程序的压力,总体上改进了CPU的使用率和处理能力.

15、 A small increase in the number of idle threads can produce a significant improvement in throughput.

少量增大空闲线程数可显著提高吞吐量.

16、The average daily throughput was 1 , 370 tons of ore.

日平均产量为一千三百七十吨矿砂.

17、Maximum weight matching in ATM switching has advantages of high throughput and good performance.

ATM交换中的赋权匹配有吞吐率高、性能好的优点,但是算法复杂度高,难以实时实现.

18、The more network nodes, the larger network throughput.

网络节点数目越多,网络的吞吐率也越大.
