

《打车软件会为我们带来“智能出租车”么？》

打车软件出现的目的是让我们的出行更加便捷。随着各类软件的不断发展，英国一份报告指出，未来打车软件会更加智能，有望与社交网站实现同步，从而为乘客提供更加智能的服务。未来将是智能出租车的时代。

As taxi apps become smarter, experts predict they will sync with social networks and calendars to provide an even more efficient and tailored service to their passengers. Here comes the rise of the smart taxi.

??

TVs in the back of cabs could automatically change channel based on a user's likes or dislikes, for example, or drivers could anticipate when and where a passenger will need a ride – even before the customer does.

??

The app will know when you are leaving a client meeting and send a taxi to meet you.

??

And as wearables increase in popularity, waving a hand to hail a cab will easily be detected by an electronic ring or wristband.

??

Within the next five years, as self-driving technologies become more mainstream, futurologists predict that many cars will converge with the high street.

??

In addition to carrying passengers, self-driving cars, as well as traditional taxis, may also become delivery drivers.

????????????????????????????????????

This means people could order a taxi to collect dry cleaning, for example, or deliver medicine using a single app.

??
