《母鸡孵出孔雀宝宝当“代理妈妈”》

?????????“????”

??????????????60??

Sixty baby peacocks are being cared for by four hens in Jiangnan Park, Jilin city, Northeast China's Jilin province, cnr.cn reported.

According to the birds' feeder, captive breeding peacocks are easily disturbed by the external environment and do not incubate their own eggs. Hens become sitters to incubate and care for the babies. The infant peacocks will leave their 'hen mothers' before winter.
