

《单词百科:EDHF是什么意思?EDHF怎么发音?EDHF的解释和用法》

英语单词EDHF是什么意思?EDHF怎么读?EDHF怎么发音?简答网为您整理了EDHF的解释、用法、例句、词组等相关学习资料。下面跟小编一起来看看吧!

EDHF的意思

1、[医]内皮衍生的(依赖性)超极化因子;

EDHF的双语例句

1、Conclusion In the small mesenteric artery of rats the endothelium-dependent relaxation was mainly caused by EDHF.

结论EDHF在大鼠肠系膜微动脉的内皮依赖性舒张反应中起主要作用;

2、Mechanism of EDHF in the Relaxation to Acetylcholine in Rat Basilar Arteries and the Effects of Total Flavones of Rhododendra

大鼠脑基底动脉舒张作用的EDHF机制及杜鹃花总黄酮的作用

3、 Aim To investigate the role and mechanism of endothelium-derived hyperpolarizing factor (EDHF) in shear stress induced vasorelaxation of rat mesenteric artery.

目的研究内皮依赖性超极化因子 (EDHF) 在剪切应力引起的内皮依赖性舒张反应中的作用及机制。

4、 EDHF has been demonstrated unequivocally in various blood vessels from different species, including human, and is likely to play an important role in cardiovascular physiology and pharmacology.

在不同物种、不同血管，EDHF反应都得到了确认。其在心血管生理学和药理学方面有着重要的作用。

5、 Objective To evaluate the role of endothelium-derived hyperpolarizing factor (EDHF) in flow-dependent coronary vasodilation induced by reactive hyperemia (RH).

目的评价内皮衍生超极化因子 (EDHF) 在血流介导性冠状动脉反应性充血扩张中的作用。

6、 Besides cyclooxygenase and nitric oxide synthase, another distinct endothelial pathway, endothelium-dependent hyperpolarization factor (EDHF), is involved in relaxation of the vascular smooth muscle cells.

内皮依赖性超极化因子 (endothelium-depen-denthyperpolarizingfactor , EDHF) 是血管平滑肌内皮源性舒张反应中通过非环氧合酶、非一氧化氮合酶途径的舒张因子。

7、 Objective This study was designed to observe the effects of endothelium-derived hyperpolarizing factor (EDHF) on the tension of rabbit mesentery arteries in vitro and to probe the mechanism of vessel relaxation induced by EDHF.

目的探讨内皮依赖性超极化因子 (EDHF) 对血管平滑肌张力的影响。

以上是简答网为您整理的EDHF怎么读的相关信息，希望对大家有一定的帮助。查看更多关于EDHF的
