《惊呆！出土800年前手机神似诺基亚 外星人留下？》

A picture of an '800-year-old mobile phone' has sent conspiracy theorists into overdrive - again.The supposed archaeological find - which bears a striking resemblance to a 1990s mobile phone - has gone viral and prompted much discussion online.

??“800?????”????????????????????????90????????????????????????????????????

A number of conspiracy theory sites have posted details about the striking image in the last few days, with claims it was found during a dig in Austria earlier this year.

??

However, they all repeat details from a post on picture sharing site Flickr dating back to January 2012 making the same claims.In that post, there are no details given about when the dig took place are given or who was involved.

??Flickr???2012????????

It does claim though, as do the more recent posts, that the excavations were carried out in Salzburg. There appear to be no other images from the same 'dig'.Among the comments on the Conspiracy Club website are "I bet it has horrible look" and "there's probably five missed calls ".

??????????????Flickr??“?????”??????????“???????”?“?????
??5????”??
